PROFESSIONAL SUMMARY

Data Engineer at PwC with end-to-end delivery experience across 5 client engagements spanning pharma, chemicals, consumer goods, energy, and insurance. Sole designer of a production-grade, config-driven Medallion Architecture ETL framework (Python / Databricks / SQL) — adopted by 4–5 teams, validated on 20+ data objects with 100% accurate results, and infinitely scalable with zero code changes per new object. Strong Azure cloud background (4 Microsoft certifications: DP-203, AZ-204, AZ-500, AZ-900) and a CS research foundation in AI and security.

WORK EXPERIENCE

Associate Data Engineer · PwC

Sep 2024 – Present | Gurugram, India

AXA · Insurance | Bronze-to-Silver ETL Framework | Python / Databricks / SQL

- Sole designer and developer of a config-driven ETL framework (v13) implementing the Medallion Architecture (Bronze-to-Silver) — built to process any data object type; validated on 20+ objects with 100% accurate results and infinitely scalable with zero code changes per new object.
- Implemented a full SCD suite (SCD 0/1/2/6) with MD5 row-hash change detection, complete audit trails (hash_audit.xlsx, stats.xlsx, bad_data_records.xlsx), and per-run archive management.
- Built a flexible transformation engine supporting datatype casting, SHA-256 PII hashing, derived columns, multi-source joins (LEFT/INNER/OUTER), regex cleansing, and 11-operator WHERE filtering — all config-driven via Excel.
- Adopted by 4–5 teams across the engagement for diverse object types; extending the framework to support Delta Lake output for the Silver layer, with data lineage and optimal partitioning as next phases.

Inpex · Energy (Japan) | RTR & JV Objects | SAP BODS / S/4HANA

- Independently managing 10–20 complex Record-to-Report (RTR) and Joint Venture (JV) data objects end-to-end for a major Japanese energy client using SAP BODS and S/4HANA.
- Sole owner of object design, BODS transformation flows, data mappings, execution, and quality validation — handling extensive and intricate configurations with no support.

Spectrum Brands · Consumer Goods | Customer Master Objects | SAP BODS

- Led and independently managed 10–15 customer master data objects for a full SAP migration — owning the complete lifecycle from object design to validated load.

IVL · Chemicals (Belgium) | RTR Objects | SAP BODS

- Delivered 10–15 RTR data objects and BODS transformations for a global chemical manufacturer; handled data validation and governance as part of a complex cross-border SAP migration.
- Established strong delivery foundation in SAP BODS, RTR object design, and data quality practices that carried through all subsequent engagements.

Therapak · Pharma | RTR Objects, Python Automation & BODS | Merger Project

- First PwC resource on the engagement — established the delivery chapter from scratch for a pharma client undergoing a merger-driven SAP consolidation.
- Delivered 10–15 RTR data objects end-to-end and built Python automation scripts that improved migration process efficiency by 90% (from ~2 days to under 2 hours) while maintaining 99.8% data accuracy.

DisFlix · Internal Training | Azure Cloud Pipeline PoC

- Built a cloud-native real-time data pipeline PoC using Azure Databricks, Event Hubs, ADF, and Synapse — practical application of Azure Data Engineer (DP-203) concepts.

Technology Consultant Intern · PwC

May – Jul 2023 | Gurugram, India

- Built a GenAI proof-of-concept using Azure Cognitive Services to auto-summarise Business Requirement Documents; integrated a PowerApps front end with secure Azure Blob Storage (SAS tokens).

Security Intern · SAP *Aug – Sep 2022 | Remote, India*

- Conducted vulnerability assessments, password policy audits, and phishing simulations; researched enterprise-grade authentication and incident response mechanisms.

TECHNICAL SKILLS

Data Engineering	Python (pandas, PySpark), SQL, Apache Spark, Databricks, Delta Lake, ETL/ELT design, Medallion Architecture (Bronze–Silver–Gold), SCD 0/1/2/6, MD5 CDC, Data Warehousing
Azure Cloud	Azure Data Factory (ADF), Databricks, Synapse Analytics, Event Hubs, Blob Storage / ADLS, Azure Cognitive Services
SAP	BODS, MDG, LTMC, S/4HANA — data migration, RTR, JV, customer master objects
Databases	PostgreSQL, MySQL, SQL Server, Parquet
Programming	Python, PySpark, SQL, Bash, Linux CLI
Currently Learning	Apache Kafka, Spark optimisation, dbt, Docker

CERTIFICATIONS

Azure Data Engineer Associate (DP-203) · Microsoft *Oct 2024*
Azure Developer Associate (AZ-204) · Microsoft *Feb 2025*
Azure Security Engineer Associate (AZ-500) · Microsoft *Feb 2025*
Azure Fundamentals (AZ-900) · Microsoft *Oct 2024*

NOTABLE PROJECTS

De-AI — Human vs AI Code Classifier *Oct 2023 – Apr 2024*

- Fine-tuned a custom transformer model (inspired by 'Attention Is All You Need') to classify human vs AI-generated code with ~80% accuracy across BERT, GPT, Bard, and Gemini outputs.
- Analysed ethical implications of model bias in AI code generation. Open-sourced at github.com/CapTaaha/De-AI

Quantum Computing & Post-Quantum Cryptography Exploration

- Implemented Shor's algorithm via Qiskit; researched Post-Quantum Cryptography and RSA/AES vulnerabilities against quantum attacks.

EDUCATION

B.Tech — Computer Science & Technology *Nov 2020 – Nov 2024*
Indian Institute of Engineering Science and Technology (IIEST), Shibpur · CGPA: 8.77 / 10

- Thesis: De-AI — Fine-tuned transformer model for AI vs human code classification (~80% accuracy)
- Relevant coursework: Quantum Computing, Cryptography, Machine Learning, Information Security, Networks

LEADERSHIP & VOLUNTEERING

- CodeIIEST Cybersecurity Chapter Lead — Organised 10+ workshops and CTF events for 700+ participants across institutions.
- PwC CSR Group — Mentoring underprivileged students; promoting digital literacy and inclusion.
- Breakthrough India — Supporting campaigns against gender-based violence through youth education.
